Diagram 230 shows a cross-section of a concrete wall. The wall is composed of two vertical columns of concrete blocks. A vertical reinforcement bar is embedded in the wall, and a horizontal tie rod is attached to the reinforcement bar. The tie rod is anchored into the concrete blocks.

The diagram illustrates a four-stage cross-flow heat exchanger. It consists of four rectangular sections arranged vertically. The top section shows a single U-tube with diagonal cross-hatching. The second section shows two U-tubes in series. The third section shows four U-tubes in series. The bottom section shows a single U-tube with diagonal cross-hatching. The entire assembly is enclosed in a rectangular frame with a hatched border.

A diagram showing a cross-section of a double-walled structure. The outer wall is represented by a thick black line, and the inner wall by a thinner black line. Between the two walls, there is a shaded region with diagonal hatching. The top and bottom edges of the inner wall are also hatched.
